SUMMARY

Full stack developer (Python, Django, React) who builds LLM-powered products and deploys them end to end. Built HireLens, an AI resume and job matching app. Strong in REST APIs, JWT auth, PostgreSQL and production deployment. Experienced in handling concurrency, background jobs and automated alerts. Seeking an AI engineer or full stack developer role where I can build real products and grow with the team.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, HTML, CSS
AI: Groq LLM API, prompt engineering, structured JSON output, grounded text generation, PDF text extraction (pypdf)
Backend: Django, Django REST Framework, SimpleJWT, django-filter, drf-spectacular
Frontend: React, Vite, REST API integration, responsive UI
Databases & Deployment: PostgreSQL (Neon), SQLite, Render, Vercel, Cloudinary, cron jobs, Brevo API
Tools: Git, GitHub, Docker, Postman, VS Code
Concepts: REST API design, JWT auth, object-level permissions, atomic transactions, race conditions, API testing

PROJECTS

HireLens – AI Resume & Job Matching *Python, Django, DRF, React, Groq LLM, PostgreSQL*
Live: hirelens-seven-smoky.vercel.app | Code: github.com/mohanrajtunes/hirelens

- Built an AI app that compares a resume with a job description and returns a match score, the skills the resume is missing and a tailored cover note
- Scored each match from an LLM review that returns structured JSON, validated before it is shown; cover notes are written only from facts in the resume and never claim a skill the candidate lacks
- Added PDF resume upload with text extraction, JWT auth with refresh rotation, and rate limits on login, upload and AI calls
- Built an application tracker and a skills gap page with a React and GSAP interface; deployed on Vercel, Render and Neon PostgreSQL

PingBoard – Uptime Monitoring & Status Page *Python, Django, DRF, React, PostgreSQL*
Live: pingboard-frontend.vercel.app | Code: github.com/mohanrajtunes/Pingboard-backend

- Developed a full stack monitoring service that checks user URLs every minute and shows status, uptime and incident history on a React dashboard
- Engineered incident detection that opens after 2 consecutive failed checks, auto-resolves on recovery, and emails owners via Brevo API (after Render blocked SMTP)
- Exposed a public status page API (24h uptime per monitor) that powers the live status card on my portfolio
- Containerised the backend with Docker and docker-compose; deployed on Render, Neon PostgreSQL and Vercel, and secured the scheduler endpoint with a secret header to block unauthorized triggers

ShopFlow – Multi-vendor E-commerce *Python, Django, DRF, React, JWT, Cloudinary*
Live: shopflow-frontend-alpha.vercel.app | Code: github.com/mohanrajtunes/shopflow-backend

- Architected a multi-role platform (Admin, Vendor, Customer) with JWT auth, letting vendors upload product images and track orders and revenue
- Eliminated overselling under concurrent checkouts by locking stock rows with transaction.atomic() and select_for_update()
- Enforced object-level permissions so vendors manage only their own products; added filtering, pagination, Swagger docs and unit tests
- Delivered a responsive React frontend with dark/light themes, cart, order tracking and a vendor dashboard

PaySplit – Expense Sharing & Settlement API *Python, Django, DRF, SimpleJWT*
Code: github.com/mohanrajtunes/paysplit-backend

- Designed a Splitwise-style REST API for group expenses and debt settlement
- Implemented equal, exact and percentage split engines with strict validation (percentages total 100%, exact amounts match the bill)
- Built balance (who owes whom) and timestamped settle endpoints, secured with membership-based permissions

EDUCATION

B.Tech, Computer Science and Engineering – Sri Manakula Vinayagar Engineering College Sep 2021 – May 2025
CGPA: 7.24 | Coursework: DBMS, OOP, Computer Networks, Operating Systems

HSC: 93% | SSLC: 88.2% – Amalorpavam Higher Secondary School 2018 – 2021

ADDITIONAL

Languages: English (professional), Tamil (native) | **IELTS:** Overall Band 7.0
